Landscape Attributes:

Madness Yellow Petunia is a dense herbaceous annual bedding plant with a mounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This annual bedding plant will require occasional maintenance and upkeep. Trim off the flower heads after they fade and die to encourage more blooms late into the season. It is a good choice for attracting hummingbirds and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Madness Yellow Petunia is recommended for the following landscape applications;

- Container Planting
- General Garden Use
- Border Edging
- Mass Planting
- Hanging Baskets

Plant Characteristics:

Madness Yellow Petunia will grow to be about 15 inches tall at maturity, with a spread of 14 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. This fast-growing annual will normally live for one full growing season, needing replacement the following year.

"Meeting your growing needs since 1925"

This annual bedding plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This plant can be propagated by cuttings.

This particular variety is an interspecific hybrid.
