## Plant Finder

### Windflower

*Anemone sylvestris*

Height: 15 inches

Spread: 18 inches

Sunlight: ○ ●

Hardiness Zone: 2

#### Ornamental Features

Windflower has masses of beautiful white daisy flowers with yellow eyes at the ends of the stems from mid spring to early summer, which are most effective when planted in groupings. Its deeply cut ferny leaves remain forest green in color throughout the season. The fruit is not ornamentally significant.

#### Landscape Attributes

Windflower is a dense herbaceous perennial with a more or less rounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats.

Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading
- Self-Seeding

Windflower is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover
- Naturalizing And Woodland Gardens

## **Plant Finder**

### **Planting & Growing**

Windflower will grow to be about 12 inches tall at maturity, with a spread of 18 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America. It can be propagated by division.
